The United Illuminating Company Promotes LED Light Bulbs through Energize Connecticut Events in 2014

*LED lighting sales soared more than 400 percent over 2013*

Through retail promotions, customers were incented to install LED light bulbs to replace their incandescent bulbs. Residents also were given energy efficiency tips, information on various energy-saving programs and the opportunity to speak with their local municipal leaders and energy efficiency experts from UI. The events, hosted by Energize Connecticut in conjunction with UI's Clean Energy Communities program, encouraged local residents to take control of their energy future by switching to high-efficiency LED lighting.

“Getting the LEDs in the hands of residents is key in helping them experience the performance and true value of the latest lighting technology, and we are really pleased with the participation and results of the 2014 light bulb exchange events," said Pat McDonnell, senior director of conservation and load management, UIL Holdings Corporation.

“The community outreach events also allow UI to provide residents with education on LED technology and other solutions to reduce their energy bills, and this is the primary objective of the Energize Connecticut initiative,” McDonnell said.

“Within the last year, LED sales experienced more than a 400 percent increase in Connecticut’s residential retail market. UI's territory alone saw sales of 362,244 ENERGY STAR LEDs in 2014 compared to just 87,604 LEDs in 2013," said Elizabeth Murphy, program administrator of retail products, UIL Holdings Corporation.

Now is the best time to prepare for the January electric rate increase by making efficiency improvements around the home that can lower energy use. By switching to high-efficiency LED lighting homeowners will see immediate savings. One LED light bulb can last up to 25 times longer and uses about 80 percent
less electricity than an old-fashioned incandescent. In addition, the light quality and dimming capability of an LED bulb is equal to or even may exceed that of an incandescent bulb.
